April 2008

Oklahoma Group, Inc. is honored to announce that we now are the exclusive representative for Safe-T-Cover.

Safe-T-Cover is the largest producer of metal backflow preventer enclosures in the country and manufacturers and warehouses out of Nashville, TN. Their top 20 models are also inventoried in the Tennessee and can ship any standard enclosure model in 2 – 3 weeks after an order is received.

HydorCowl began selling freeze and vandal protection enclosures in 1988. The company was formed by Dean and Patty Davenport through their 35+ years experience in water systems and fire-water systems construction experience. Through the years, Dean Davenport installed numerous large diameter backflow, water meter, control valve, and pumping systems and recognized the need for aboveground installation for Safety of the inspection and maintenance personnel. The Safe-T-Cover name was incorporated in the mid 1990's.

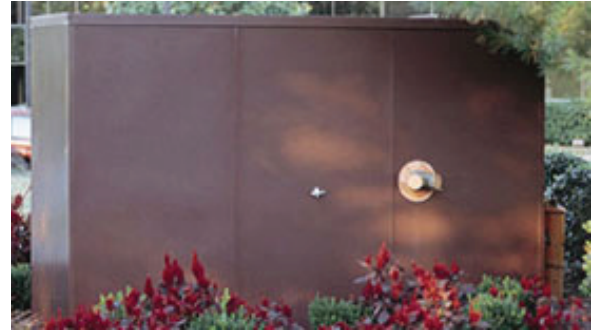

Safe-T-Cover enclosures are fabricated from 18 gauge aluminum, 1.5" fiberglass reinforced polyisocyanurate insulating board, heart grade redwood, and stainless hardware. These rugged materials and metal construction provide a super strong product capable of withstanding the elements and the test of time. They also have Alumalad Kynar coated aluminum available in 32 various colors.

For panel design enclosures, Safe-T-Cover offers conventional wall-mounted heaters and Safe-T-Cover's patented slab-mounted heating system. (US Patent Number 5,609,784).

Safe-T-Cover's slab-mounted heaters, model HCHS (23" long) is their slab heater that is wired for 500 and 1000 watts and the HCH (37" long) is wired for 2000 watts. Both models are available in either 120 volt or 240 volt. The HCH and HCHS heaters are ¾" thick solid aluminum platen units with 2 heating elements cast within. The junction well is explosion-proof and water-tight. The HCH and HCHS units are provided with a thermostat, conduit and fittings designed for water-tight installation. The HCH and HCHS heaters are designed to withstand water spray conditions, as can be found when installed underneath a RPZ backflow assembly.

The wall mounted heaters, Electromode 7150 and Chromalox HVT 2411 models, vary from 500 watts to 2000 watts and either 120 volt or 240 volt. These heaters also include self-contained thermostats.

The American Society of Sanitary Engineering (ASSE) adopted standard #1060 *Performance Requirements for Outdoor Enclosures for Backflow Prevention Assemblies* in 1996. This 1060 is the benchmark for construction in the backflow enclosure industry. All Safe-T-Cover's standard enclosure models (over 50) conform to the ASSE Standard 1060. Below are the aspects of how backflow preventer enclosures should be designed:

- Freeze protection to -30°F ambient conditions
- Structural strength for loads of 100 pounds/square foot
- Adequate drainage for RPZ assemblies
- Access requirements for testing and maintenance
- Materials of construction are specified
- Security and vandalism protection are required

The Oklahoma Group is excited to begin our relationship with Safe-T-Cover and equally excited about sharing job opportunities with you.

Oklahoma Group, Inc. was reestablished in 2005 by Hugh M. Cunningham, Inc. We last served Oklahoma as a representative in 1984, we are proud to be back in Oklahoma as Oklahoma Group, Inc. The account managers that serve Oklahoma Group, Inc. are supported by market and sales specialists in the HVAC, Fire Protection, Waterworks, Specification, Training, Builder and Plumbing and Mechanical divisions.

Please feel free to contact us and we look forward to our next visit with you.
